DR. RALPH FIORETTI

INTRODUCING DR. RALPH FIORETTI (S.C. to I.D.)

(Fioretti-Burnett)

**DON'T MISS THIS RARE OPPORTUNITY!
THE DEBUT OF A BLUE RIBBON DAHLIA
A YEAR IN ADVANCE**

Originally scheduled for introduction at the leading Dahlia Shows, and for initial sales to the public in 1946-47, lack of sufficient growing space has forced us to offer this outstanding variety to all Dahlia lovers for the 1946 Spring planting season.

Dr. Ralph Fioretti is the Dahlia of perfection seldom found even among the prize winners. A pure creamy white, semi-cactus to informal decorative type. Good whites are always scarce and a white in this classification even more so. The large, graceful flowers averaging 13 inches across and 8 inches deep are borne on wonderfully stiff, cane-like stems, plants averaging 5 feet in height. The heavy, deep green foliage makes a most attractive plant. All stock has shown unsurpassed resistance to insects and is free of all signs of mosaic. Dr. Ralph Fioretti is a versatile bloomer, allowed to grow unpinched it flowers very early in August; pinched twice, it produces a wonderful late crop in September and October.

FLORIST'S BEAUTY

It also gives us great pleasure to offer this very fine Formal Decorative Bicolor Dahlia. A striking amaranth purple with white tipped, pointed petals. The 6- to 7-inch blooms are held on long, perfect stems. This is the flower you have been waiting for whose keeping quality matches Jersey Beauty as a cut-flower. An Honor Roll Dahlia.

\$5.00 per root, \$10.00 per clump—Plants \$2.50 each, 3 for \$6.80

LAWN VIEW OF PRIVATE ESTATE SOWN WITH BURNETT'S "KILLARNEY" LAWN GRASS SEED MIXTURE

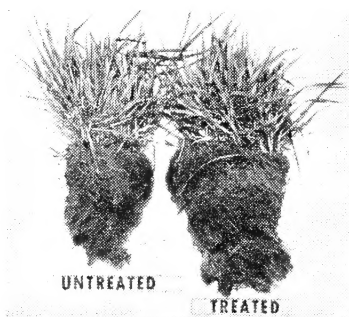

Burnett's Lawn Grass Seed Mixtures

TESTED and PROVEN MAXIMUM FREEDOM FROM WEEDS HIGH GERMINATION and PURITY

The Satisfaction of a Perfect Lawn

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.**, with a reputation of supplying grass seeds of the highest quality for a period of over 30 years, assume the responsibility of furnishing good seed. Literature on "Building New Lawns and Renovating Old Lawns" free on request.

HORMONE-TREATED LAWN GRASS SEED

Plants from Hormone-Treated Grass Seed have nearly three times the root strength of plants from untreated seed

Outstanding among the scientific discoveries of recent years. Extensive experiments have shown that the Hormone Treatment of Grass Seeds will result in quicker germination and a marked increase in root growth.

The production of this strong, extra vigorous root system (see illustration above) is of vital importance in making a new lawn or renovating an old lawn. The extra stimulant derived from Hormone Treatment is of particular value for late seedings, or where it is necessary to produce an established turf in a relatively short time.

HORMONE-TREATED available in all mixtures at 5c. per lb. additional to listed prices.

Sow *Killarney* LAWN SEED and Walk on Velvet

Composed of a combination of the finest imported and domestic grasses, the highest grades possible to procure, and specially adapted for this climate. This mixture is composed of all solid, recleaned seeds of the highest germination. Therefore, both owners of large estates and small homes requiring a permanent sod and everlasting lawn should by all means use this high-grade mixture. If the ground is properly prepared, we are certain "**Killarney Mixture**" will produce a turf of velvet.

Special LAWN GRASS MIXTURE

The above mixture is made from our own formula, and composed of grasses specially adapted for the purposes of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable, dwarf evergreen, **recleaned** grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn.

SOIL-SOAKER HOSE

The new "seepage irrigation" method that soaks the soil thoroughly like an "all night rain." Puts the water where you want it and where it should be—on the ground—not up in the air to be wasted and carried away by high winds. Excellent for use in gardens and lawns, and around shrubs, trees, hedges, borders, etc. Porous canvas is treated to resist mildew. Screws to faucet or water hose, replacing sprinkler, and is closed at far end. 18 ft. \$2.05, 30 ft. \$3.10, 50 ft. \$5.00 (postpaid).

Burnett's SHADY PLACE MIXTURE

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if the drainage is defective it is apt to be covered with moss. In such cases lime raked in will sweeten the soil, but the moss should be first removed. 2½ lbs. \$2.50, 5 lbs. \$4.85, 12½ lbs. \$11.75, 25 lbs. \$23.00, 50 lbs. \$44.00.

PERMANENT TURF

Our very finest all-purpose formula that will produce the most permanent lawn possible. In sun or shade—good or poor soil. Prepared especially for Chinch Bug infested areas

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest, the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our "Permanent Turf."

Permanent Turf (no Clover). 2½ lbs. \$2.90, 5 lbs. \$5.50, 12½ lbs. \$13.00, 25 lbs. \$24.50, 50 lbs. \$46.00.

Permanent Turf (with White Dutch Clover). 2½ lbs. \$3.15, 5 lbs. \$6.00, 12½ lbs. \$14.25, 25 lbs. \$27.00, 50 lbs. \$50.00

SEASHORE FORMULA

This mixture is composed of grasses most suitable for areas near the ocean. Will give good results in all sandy soils. Deep rooting grasses that are not injured by salt water.

"BANK AND TERRACE" LAWN MIXTURE

The Terrace mixture which we offer is composed of deep-rooting grasses which, if once established, will hold the soil and prevent washing. We advise liberal fertilization and seeding so that the grasses may be quickly established. 2½ lbs. \$2.40, 5 lbs. \$4.65, 12½ lbs. \$11.25, 25 lbs. \$21.50, 50 lbs. \$40.00.

QUANTITY OF GRASS SEED TO USE

For all general purposes, 1 lb. will sow 150 to 200 sq. ft.; 150 to 200 lbs. per acre. Use one-half these quantities when renovating an old lawn. **Consult Us About Your Lawn Problems—We Are At Your Service**

Try Early Giant and Super Giant Asters } The Largest Asters in Existence. Wonderful Colors

BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers, sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.

ASPARAGUS, Pedigreed Washington

A SPECIALTY WITH US

ASPARAGUS KNIVES

The only proper and efficient method of harvesting Asparagus. Each 75c. Illustrated on page 60.

ASPARAGUS ROOTS

Can be planted either in Spring or Fall.

Culture—To make a permanent Asparagus bed, the ground should be trenched deeply and well drained. The trench should be filled up with a rich compost of well-rotted manure and loam. Set roots 12 inches apart in the rows, allowing 2 to 3 feet between rows, spreading out and separating the roots carefully so that the crown will be covered with about 6 inches of soil. In November, when the stalks have been cleared away, give the bed a good top-dressing. In early Spring a liberal application of agricultural salt will be beneficial.

Pedigreed Washington. High quality strain developed by the U. S. Dept. of Agriculture. It is rust-resistant and produces large, straight, dark green shoots with tight, firm tips which do not open until well out of the ground. Strong, 2-year-old roots \$1.75 per 25, \$6.00 per 100, \$50.00 per 1000. Extra large, selected, 3-yr.-old roots, \$2.25 per 25, \$8.00 per 100, \$70.00 per 1000.

We strongly recommend our 3-yr.-old transplanted roots for quickest and best results

Thos. Laxton—Finest of all Peas for Canning

GARDEN PEAS 2 pounds will plant about 100 feet of drill

Peas do best in a light, rich soil; for private use sow in double rows 6 to 8 inches apart, the rows 2 to 4 feet apart, the tall ones requiring brush. Commence sowing the extra early varieties as soon as the ground can be worked in March; continue for a succession every two weeks until June. A good crop can be secured by sowing the extra early sorts in August for Fall use. The wrinkled varieties are not as hardy as the small round sorts, and if planted early should have a dry soil, or they are liable to rot in the ground; they are, however, the sweetest and best flavored.

STRAWBERRY PLANTS—^{POT}GROWN

Strawberry Plants are not difficult to grow and readily adapt themselves to a great variety of soils and climates. Pot-grown plants can be set out in the field at any time during the Spring or late Summer and early Fall months, as their strong, fibrous roots take hold quickly in new location, and can be depended upon to produce bigger crops of larger berries than field-grown layer plants.

A careful selection of varieties will insure fresh berries in the garden from early June until late Fall. This can be accomplished by choosing an **early**, a **midseason** and a **late** fruiting type as

indicated in description of varieties listed below. We recommend planting no less than 25 plants of a variety as we know from experience that growing fewer plants does not give a satisfactory picking for a small family.

PREPARATION OF SOIL

Dig bed for your plants to a depth of 14 inches and incorporate well rotted manure (not fresh manure) or decomposed leaves with the soil. Afterwards scatter Bonemeal on each bed, raking it well into the surface.

PLANTING INSTRUCTIONS

When plants arrive, unpack at once and place in a shady spot, sprinkling them lightly with water. After hot sun has gone down in early evening, dip each root ball in a pail of water and loosen the soil with the fingers. Be careful not to knock soil from the roots. When planting, set the plants 1 foot apart in the row, spacing the rows 2 feet apart. Plants need a minimum of 6 hours sun a day so do not plant in very shaded location.

RULES FOR SUCCESS

Most important rule is to keep weeds down by cultivating which will also loosen the soil, preserve moisture and induce healthy growth. If good, clean salt hay is available it is advisable to mulch the entire bed about the time green berries are forming, working hay well under the leaves. This practice keeps down weeds during fruiting season, keeps berries clean and free from rot and preserves soil moisture. In early Winter mulch the beds with a light covering of coarse manure, evergreen boughs, salt hay or similar material.

New! BURNETT'S PERENNIALS *Versatile!*

OUR OWN OUTSTANDING INTRODUCTIONS and SELECTED FAVORITES

Our perennial plants are all strong, field-grown or potted stock. They are **vigorous, young plants** that will readily establish themselves permanently in your garden. Do not buy perennial plants by size alone. Large, old clumps are never satisfactory and will soon die out when transplanted. **Plants are not sold in any quantities less than those priced.** 5 plants of any one variety are sold at the 10 rate. Take advantage of this saving over the smaller quantities.

Cultural Hints—Never plant Hardy Perennials too deep, and as a rule they prefer a well-drained, loamy soil that is neutral or slightly alkaline. Poor soil should be well prepared beforehand by digging in well-rotted manure with bonemeal added if possible. When fertilizing make sure no commercial fertilizers ever come in direct contact with plant as this will burn young roots and lower foliage. Keep weeds down and soil loose around plants by frequent cultivation. **Purchaser pays transportation charges on all plants.**
